## Professional Summary

---

Computer Science graduate with 3 years of hands-on experience in Linux systems, networking, virtualization, and cybersecurity technologies. Skilled in designing secure enterprise networks, configuring routing and switching environments, troubleshooting technical issues, and building cybersecurity lab environments. Experienced with Linux administration, penetration testing tools, and Capture The Flag (CTF) challenges. Strong interest in network administration, infrastructure support, enterprise networking, cybersecurity operations, and IT systems management.

## Technical Skills

---

- **Networking:** VLANs, Inter-VLAN Routing, DHCP, RIP v2, TCP/IP, Network Troubleshooting, Network Design
- **Systems:** Linux, VMware, VirtualBox, SSH, System Administration, Virtualization
- **Security:** Cisco ASA Firewall, Vulnerability Assessment, Network Security, Penetration Testing
- **Programming Languages:** Python, C++, Java, Bash
- **Database:** SQL, MySQL
- **Frameworks:** FastAPI, OWASP Top 10, NIST, MITRE ATT&CK
- **Tools:** Jira, Git, GitHub, AWS, Linux, Wireshark, Burp Suite, Nmap, Apache, Maven, Metasploit

## Projects

---

### Secure Enterprise Network

[Project Page]

**Technologies:** Cisco Packet Tracer, VLANs, Inter-VLAN Routing, DHCP, RIP v2, Cisco ASA Firewall, Network Security

- Designed and implemented a secure campus-style enterprise network supporting 8 departments and 80 endpoint devices across isolated VLANs and subnet ranges.
- Configured Layer-2 and Layer-3 switching infrastructure to provide VLAN segmentation, trunking, inter-VLAN routing, and centralized gateway services.
- Implemented DHCP services for automated IP address allocation across all departmental networks.
- Deployed RIP v2 dynamic routing between the Core Layer-3 switch and edge router.
- Secured the network perimeter using a Cisco ASA 5506-X firewall with traffic filtering policies and access restrictions.
- Designed a hierarchical enterprise architecture consisting of access switches, a core switch, router, firewall, and ISP simulation.

### CyberSpace — Cybersecurity Intelligence Hub

[Live Demo]

**Technologies:** JavaScript, HTML5, CSS3, Web Crypto API, Threat Intelligence, WHOIS

- Developed a cybersecurity threat intelligence platform that performs domain reputation analysis, password auditing, and client-side security assessments.
- Implemented WHOIS intelligence modules to retrieve domain ownership and registrar information.
- Built a dual-mode threat scanning engine capable of analyzing URLs and files using browser-based security checks and cryptographic hashing techniques.
- Integrated password auditing capabilities including entropy calculations and common-password detection.
- Developed and deployed the platform as a public web application with VirusTotal API integration support.

## Grasshopper

[Website]

**Technologies:** *Ubuntu Linux, SSH, Telnet, FTP, MySQL, HTTP, VMware, VirtualBox*

- Designed and developed an open-source beginner-friendly vulnerable Ubuntu virtual machine for ethical hacking and cybersecurity training.
- Created realistic attack scenarios involving SSH, Telnet, FTP, MySQL, HTTP, and intentionally exposed services.
- Developed hands-on challenges focused on Linux fundamentals, enumeration, remote connectivity, file handling, service exploitation, and troubleshooting.
- Packaged and distributed the machine as an OVA image for deployment in VMware and VirtualBox.
- Shared the platform with more than 150 students to support cybersecurity learning and CTF preparation.
- Published the project as a free and open-source educational resource with installation and deployment guidance.

## Experience

### Teaching Assistant

Jul 2025 – Sep 2026

**Institute of Management Sciences, Peshawar**

- Assisted in teaching Information Security and Operating Systems through practical labs and classroom support.
- Guided students in Linux administration, networking, and cybersecurity exercises.
- Prepared technical learning materials, quizzes, assignments, and lab activities.
- Provided troubleshooting support for student projects, lab environments, and system configurations.

## Leadership & Workshops

- Led a VMware Workstation workshop covering virtualization, virtual machine deployment, networking, and resource management.
- Conducted a cybersecurity workshop introducing ethical hacking, vulnerability assessment, Nmap, and Burp Suite.

## Education

### Institute of Management Sciences, Peshawar

Sep 2021 – Oct 2025

Bachelor of Science in Computer Science - CGPA: 3.12 / 4.00

## Certifications

- Certified in Cybersecurity – Coursera
- Agile with Atlassian Jira – Coursera
- Improve Your English Communication Skills – Coursera
- CCNAv7: Introduction to Networks
- CCNAv7: Switching, Routing, and Wireless Essentials
- CCNAv7: Enterprise Networking, Security, and Automation
